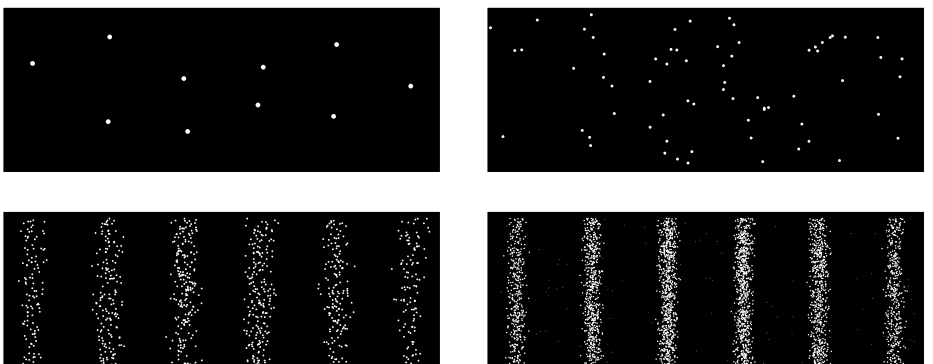
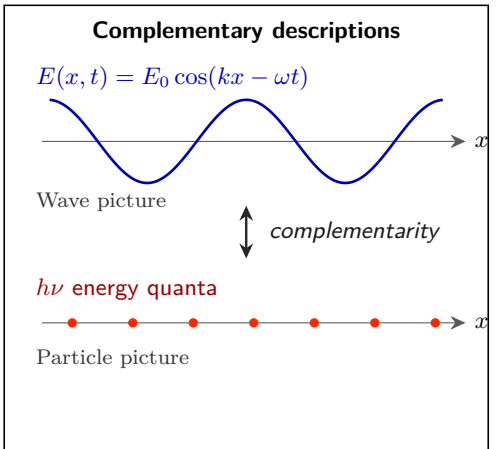
$$|\psi\rangle = \tfrac{1}{\sqrt{2}}\big(|1\rangle + |2\rangle\big) \qquad P(y) \propto |\psi_1 + \psi_2|^2$$





Fringe spacing: $\Delta y = \dfrac{\lambda L}{d} \qquad (\lambda = 633\,\text{nm},\ d = 0.2\,\text{mm},\ L = 1\,\text{m} \Rightarrow \Delta y \approx 3.2\,\text{mm})$

Figure 1 – Single-photon interference pattern built up dot by dot, and the wave/particle complementary views of the same light.
